

AMERICAN INDOOR AIR QUALITY COUNCIL Press Release

18 September 2008

IAQ Council Adds OSHA Manual to Online Test Center

The American Indoor Air Quality Council has expanded its online testing center by adding new material from additional industry texts.

Council-certified professionals may now read OSHA's *Technical Manual* and earn recertification credits by means of two short online reading tests.

"Our online testing center provides a convenient way for certificants to earn recertification credits," said Charlie Wiles, IAQ Council executive director. "The tests can be taken from the convenience of home or office, eliminating the need for travel-related expenses."

Because they are based on standard industry texts, Wiles said, the reading tests help certificants review important industry literature and stay abreast of expert opinions on current topics.

"Our certificates are the most well-informed professionals in the indoor air quality industry," he said. "These tests help us keep it that way."

The IAQ Council Online Testing Center currently offers 24 reading tests on a variety of industry texts. The testing center can be found at www.iaqcouncil.org/recertification/rctexts.htm.

The American Indoor Air Quality Council is a non-profit certifying body founded in 1993 to serve the indoor air quality industry. The IAQ Council operates independent, third-party accredited certification programs for indoor environmental consultants, microbial consultants, microbial remediators, indoor air quality administrators and residential mold inspectors. The IAQ Council certifies more than 5,000 professionals in the United States, Canada and overseas.
